01-APR.1993 (Rel. 25, Last sequence update)
15-SEP-2003 (Rel. 42, Last aenoctation update)
6enome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NG1); Protein P7: Nonstructural protein NS2 (P21)
(EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepcarivin)
(EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein
NS4B (P27); Nonstructural protein NS5A (P56); Nonstructural protein
NS5B (P66) (P70) (NRA-directed RNA polymerase) (EC 2.7.7.48));
Hepatitis C virus (isolate Taiwan) (HCV).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GTRIIASPKGPVIQMYTNVDKDLVGWPAPQGSRSLIPCIGGSSDLYLVTRHADVIPVRRR

Ohkoshi S., Shimotohno K.;
Mohecular structure of the Japanese hepatitis C viral genome.";
FEBS Lett. 280:325-328(1991).
-!- FUNCTION: THE SHALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
-!- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral
precursor polyprotein, commonly with Asp or Glu in the P6
position, Cys or Thr in P1 and Ser or Ala in P1'.
-!- CATALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE-91088550; PubMed-2175903; Kato N., Hijikata M., Ootsuyama Y., Nakagawa M., Ohkoshi S., Sugimura T., Shimotohno K., "Molecular Cloning of the numan hepatitis C virus genome from "Appanese patients with non-A, non-B hepatitis."; Proc. 6enome polyprotein (Contains: dapsid protein C (Core protein) (P22);
Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP0) (NS1); Protein E1 (GP32) (GP35); Envelope glycoprotein E2
(EC 3.4.22...); Proteins E1 (GP32) (Hepcolinin)
(EC 3.4.22...); Proteins Protein NS4A (P4); Nonstructural protein
NS4B (P27); Nonstructural protein NS5A (P56); Nonstructural protein
NS5B (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)]

Repatitis C virus (isolate HC-JT) (HCV).

-!-EUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-!- CATALYIIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 postition, Cys or Thr in Pl and Ser or Ala in Pl'.

-!- CATALYIIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE-92230232; PubMed-1314459; Okada S.-I., Yamamoto K., Lizuka H., Tanaka T., Fukmoto H., Kurai K., Okada S.-I., Yamamoto K., Lizuka H., Tanaka T., Fukuda S., Tsuda F., Mishiro S.; "F.ll-length sequence of a hepatitis C virus genome having poor homology to reported isolates: comparative study of four distinct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Þ

A; Residues: 1.547, T',549-621, V',623-624,'S',626-652,'DL',655-751,'T',763-782 < HDW;
A; Residues: 1.547, T',549-621,'V',623-624,'S',626-652,'DL',555-751,'T',763-782 < HDW;
A; Cross references: EmBL:x61591
A; Note: this sequence is inconsistent with the nucleotide translation
A; Note: the authors translated the codon AGG for residue 43 as Pro, TGG for residue
as Trp, and TTC for residue 71 as Ser
A; Note: sequence extracted trom NOBI backbone (NOBIN:121747, NOBIP:121748)
